

ARNOB RIZWAN AHMAD

Software Engineering Undergraduate • ML / Full-Stack / Mobile

Johor Bahru, Malaysia • arnobrizwan23@gmail.com • +60 17-726 0362 • [LinkedIn](#) • [GitHub](#)

PROFILE

Final-year Software Engineering student at Universiti Teknologi Malaysia with production experience as an ML Engineer for a US-based platform and full-stack developer for clients in Luxembourg and Bangladesh. Strong across PyTorch, React Native, Flutter, Nuxt.js, Node.js, and FastAPI, with hands-on AWS and Azure AI experience. Seeking junior/graduate roles in AI engineering and automation, including LLM-powered agents, ML/AI, full-stack, or mobile engineering.

EDUCATION

Universiti Teknologi Malaysia (UTM) — Johor Bahru *Expected July 2026*

Bachelor of Software Engineering

PROFESSIONAL EXPERIENCE

Application Developer — Moien Delivery — Luxembourg (Remote) *Mar 2026 – Present*

Hybrid logistics platform serving users, restaurants, and drivers

- Building a cross-platform mobile app with React Native and a Nuxt.js backend for a Luxembourg-based delivery startup, delivering features for three distinct user roles.
- Implementing real-time order tracking, driver dispatch, and delivery workflow management using REST APIs and WebSocket-based event streams.
- Integrated third-party APIs and event streams to automate order assignment, driver dispatch, and delivery status updates.
- Collaborating async with international stakeholders on weekly release cycles, owning features from spec through QA to production deployment.

Machine Learning Engineer (Contract via Mercor) — AI News HUD — USA (Remote) *Oct 2025 – Mar 2026*

US-based AI-powered news intelligence platform

- Built and evaluated production PyTorch models for real-time news classification, summarization, and personalized recommendations on a US-based platform.
- Designed evaluation pipelines and ran iterative experiments to improve model accuracy and inference latency across live traffic.
- Worked async with US stakeholders to integrate ML components from prototype to deployed feature, contributing to the platform's core intelligence layer.

Founding Backend Engineer — Framic — Remote *Aug 2025 – Present*

- Designing and building backend services from scratch as the first backend hire on an AI-powered storage application; owning architecture decisions and core API design.
- Leading development of AI search capabilities, real-time indexing, and scalable systems for gallery and drive functionality.
- Designed backend services and API endpoints that automate file indexing, AI search, and real-time gallery updates.
- Working directly with founders to ship features rapidly while keeping the system maintainable as the team scales.

Software Engineering Resident — Headstarter — Remote (US) *Sep 2024 – Mar 2025*

- Completed an intensive 6-month engineering residency, shipping 14+ ML and full-stack projects in Python and TypeScript.
- Designed and trained 5 neural networks applying LLM chaining, hyperparameter tuning, and model fine-tuning techniques.

- Built an autonomous ML agent and optimized its Docker-based CI/CD pipeline on GitHub Actions, significantly reducing image size and build times.
- Built LLM-powered agents and automation workflows using AWS Bedrock/OpenAI APIs, integrating them into backend services for end-to-end task automation (data enrichment, content generation, notifications).

SELECTED PROJECTS

ShopLocalr — Freelance Mobile Commerce App — Malaysia *Mar 2026*

- Built a cross-platform mobile commerce app in Flutter that connects customers with local businesses, with Firebase Authentication, Firestore, and Cloud Storage powering the real-time backend.
- Designed end-to-end product discovery, vendor onboarding, and order workflows on a freelance contract; shipped a production-ready build for the client.

AI-IBADAH — AI-Powered Islamic Worship Assistant — Bangladesh *Feb – Mar 2026*

- Built an Islamic worship companion mobile app with personalized prayer reminders, dua recommendations, and Quran study suggestions adaptive to user habits and the Islamic calendar.
- Designed a culturally grounded UX for Bangladeshi users, with locale-aware scheduling tied to the Hijri calendar.

School Care App — 40-school deployment — Sylhet, Bangladesh *Jan – Feb 2026*

- Delivered a full-stack School Care Management System adopted by 40 schools across Sylhet; currently in closed testing ahead of Google Play Store launch.
- Built a React web dashboard for administrators and a React Native mobile app for parents and teachers, backed by Firebase Authentication, Firestore, and Cloud Messaging.
- Streamlined attendance tracking, parent–teacher messaging, and student care workflows, replacing manual paper-based processes.

CrisisCohort — Multi-Agent AI Climate Resilience Platform — Personal Project *Oct 2025*

- Architected a climate resilience platform for smallholder farmers with 15 specialized AI agents on AWS Bedrock, orchestrating end-to-end workflows (weather alerts, disease diagnostics, subsidy discovery) for smallholder farmers.
- Designed a Netflix-inspired AWS architecture spanning Lambda, Bedrock, DynamoDB, CloudFront, API Gateway, and Cognito.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, Dart, SQL

ML / AI: PyTorch, AWS Bedrock, Multi-agent systems, Model evaluation, A/B testing, FastAPI, Zapier, N8n, Make

Frontend & Mobile: React, Next.js, React Native, Flutter, Tailwind CSS

Backend: Node.js, Nuxt.js, FastAPI, Express, REST APIs, WebSockets

Cloud & DevOps: AWS (Lambda, Bedrock, DynamoDB, API Gateway, Cognito, CloudFront), GCP, Firebase, Docker, GitHub Actions

Databases: PostgreSQL, MySQL, DynamoDB, Firestore, Neo4j, pgvector

CERTIFICATIONS

- **AWS** — Amazon SageMaker, Large Language Models, Prompt Engineering (Mar 2025)
- **Microsoft Azure AI** — Azure OpenAI Service, Natural Language Processing, Document Intelligence (Jun 2024)

ACHIEVEMENTS

- Selected as a Headstarter Software Engineering Resident — competitive 6-month US-based engineering program; shipped 14+ ML and full-stack projects.
